# Alternative performance measures

- In this presentation, certain financial data and measures are presented which are not calculated pursuant to any accounting standard and which are therefore non-IFRS measures and alternative performance measure as defined in the European Securities and Markets Authority Guidelines on Alternative performance measures. These financial data and measures are attrition / loan balance attrition, cost of funds, net interest margin / NIM, net non-interest income, return on average assets, reported return on tangible equity, yield / loan portfolio yield, cost to income ratio, tangible equity, adjusted return on tangible equity, adjusted tangible equity, adjustment for cost of funds, excess capital, core cost of risk, cost of risk, risk adjusted yield, risk adjusted operating income, loan to deposit ratio, regulatory capital, CET1, CET1 Ratio, LCR, total NPL coverage, NPL / Non-performing loans, NPL ratio, risk weighted assets, RWVA density, new production / new volume. All alternative performance measures included in this document are calculated for specified period.
- These alternative performance measures are included to (i) extend the financial disclosure also to metrics which are used, along with IFRS measures, by the management in valuating of the Group's performance, and (ii) provide to investors further basis, along with IFRS measures, for measuring of the Group's performance. Because of the discretion that the Group has in defining these measures and calculating the reported amounts, care should be taken in comparing these various measures with similar measures used by other companies. These measures should not be used as a substitute for evaluating the performance of the Group based on the Consolidated Financial Statements of the Group. Non-IFRS measures have limitations as analytical tools, and investors should not consider them in isolation, or as a substitute for analysis of the Group's results as reported under IFRS and set out in the Consolidated Financial Statements of the Group, and investors should not place any undue reliance on non-IFRS measures. Non-IFRS measures presented in this report should not be considered as measures of discretionary cash available to the Group to invest in the growth of the business, or as measures of cash that will be available to the Group to meet its obligations. Investors should rely primarily on the Group's IFRS results and use the non-IFRS measures only as supplemental means for evaluating the performance of the Group.
- The following table shows the Group's adjusted return on tangible equity, adjusted at management target CET1 Ratio currently 15.5 %, for the period of six months ended 30 June 2017 (annualized) and for the year ended 31 December 2016:

In addition to a capital rebase to 15.5%. CET1, net profit was adjusted (F) for substitution of capital with funding via deposits assuming cost of funding of the period (0.2 % annualized in the first six months of 2017 and 0.2 % in 2016) and 19.0 % corporate tax rate. Profit after tax was not adjusted for potential liquidity constraints.

Adjusted tangible equity (N) reflects the tangible equity (M) calculated as per the Consolidated Financial statements of the Group adjusted for the excess capital (i.e., capital exceeding the management target CET1 Ratio, currently 15.5 %).
